

PRECISION FINISHING MEDIA

Precision Finishing Media

Precision media is a type of ceramic media that is used when small and precise size is an issue. The super small sizes available are ideal for intricate finishing jobs, such as jewelry.

Precision media comes in two different formulations, one for polishing and another for cutting. The polishing formulation does not include any abrasives and can be used with burnishing and or other finishing compounds to provide a high luster finish. The polishing formulation comes in a white color. The fast cutting formulation comes in gray.
